

SAFETICA AUDITOR

Knowledge is the first step to security.

Safetica Auditor gives you the perfect overview about what's going on in your company. It exposes low employee productivity and warns you about possible data leaks before it's too late. You will save on HR costs, protect sensitive data and avoid wasting of resources.

Safetica Auditor proactively searches for potential risks and warns you about them. It protects your company as soon as it is implemented.

Why your company needs SAFETICA AUDITOR?

61 % of employees

abuses access to sensitive data

78 % of companies

already controls employee actions

employees spend

2x more time on social networks at work than at home

The Issue

It is difficult to effectively control employee computer use. Either accidentally or on purpose, employees can misuse company computers. This can be a simple matter of taking care of personal business at work, or it can be much more serious. In the worst case they can take sensitive data out of a company and sell it to the competition or use it to start their own business.

The Solution

Safetica Auditor shows you how effective your employees are, and which data they are trying to take out of the company. Safetica Auditor is quick to implement. It gives you both an unrivaled overview and immediate protection. It is a solution that grows with your security needs, and thus saves you time and other valuable resources.

9 WAYS TO BENEFIT FROM SAFETICA AUDITOR

Audit sensitive company data

Get an overview of what's going on in your company

Find out whether software licenses are used efficiently

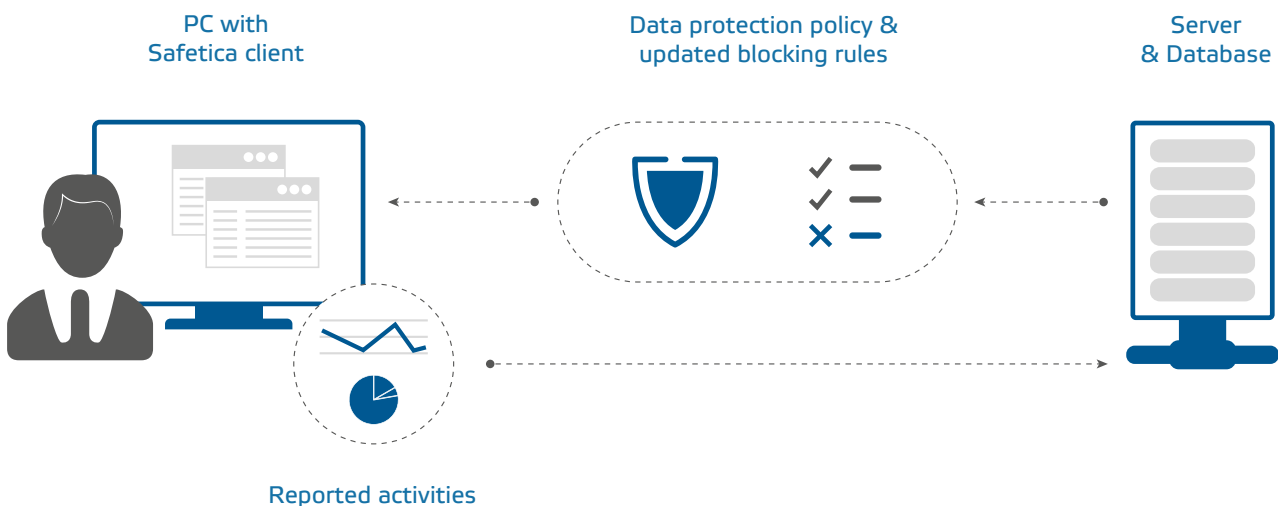

Key features of Safetica Auditor:

- Uncluttered overview of the situation in your company, with one-click access to all details.
- Regular reports and immediate notifications in your e-mail.
- Scalable adjustments for protection of both employees' privacy and company interests.
- Data leak protection through monitoring of how employees work with files.
- Reported active time of application use.
- Logs stored safely in database, visible to authorized employees only.

How Safetica works?

Safetica Auditor collects your employees' endpoint data and stores it on your servers. Managers can access the data on their console at any time. Safetica Auditor also operates on computers outside of the company network (laptops). Through precise permissions settings, you can ensure that collected data will only be accessible to authorized managers.

Endpoint events coverage

Safetica Auditor allows you to choose which activities and which (groups of) users to monitor.

- File operations on all channels including connected cloud discs and Office 365
- Applications (including active time and allocation during the day)
- Websites (including active time and allocation during the day)
- E-mails (information on attachments)
- Print (network and virtual printers with documents details)
- External devices and drives
- Endpoint data (activity, running time)
- Network utilization (with details on each application)
- Long term trends, short term deviations in activity

Technical support

Our professional in-house support team is ready to respond to requests and solve your data security issues. We use a wide range of communication and remote assistance tools to work quickly, without limiting customers to only e-mail or phone contact.

About Safetica Technologies

Safetica Technologies is a leading force in the market for internal IT security. We cover security threats stemming from a common source – the human factor. We believe that by reducing the risks from human failures (whether accidental or malicious), companies can better focus on their key business activities.

The Safetica Technologies partner network is built on proven AV distributors and experienced system integrators. Safetica Technologies products and support are currently available in more than 50 countries on 5 continents.

TECHNICAL REQUIREMENTS

Safetica client

- 2,4 GHz dual-core processor
32-bit (x86) or 64-bit (x64)
- 2 GB RAM
- 10 GB of free disk space
- MS Windows 7, 8, 8.1, 10
(32-bit and 64-bit)
- Installation package MSI
- .NET 4.5.2 and higher

Safetica server

- 2,4 GHz quad-core processor
32-bit (x86) or 64-bit (x64)
- 4 GB RAM
- 100 GB of free disk space
- Shared or dedicated server
(virtualization is possible)
- Requires connection to server
with MS SQL 2012 and higher
- MS Windows Server 2012
and higher, 32-bit or 64-bit

MS SQL (database for server)

- MS SQL Server 2012 32-bit
or 64-bit and higher, including
Express 2016 editions (Express
edition is part of the universal
installer)
- WebSafetica is available only
with MS SQL 2012 and higher
- HW and SW requirements are
available on the product website
(www.microsoft.com)
- 200 GB of free disk space
(optimally 500 GB and more,
depending on the range of
collected data)
- Shared or dedicated server
(virtualization is possible)
- When server and database are
installed on one machine, then
RAM and core requirements are
added together
